

COFFEE

filter papers

Emphasize your coffee's mark of quality with innovative branding, excellent processing and exceptional brewing properties.

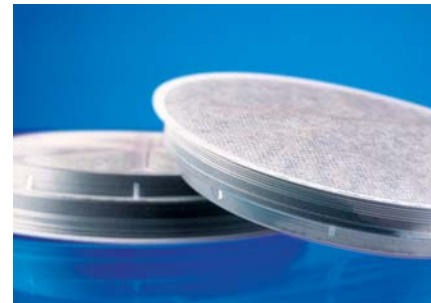

Coffee pad with logo

Commercial and technical leader in coffee filter paper

Since the development of coffee pod products for pressure-brewing machines in the early 90's, Glatfelter has continuously worked with major brands to ensure the development of unique and innovative solutions for its coffee customers.

To become the commercial and technical leader in coffee filter paper, our company has built a strong reputation for supplying high quality coffee filter papers for hard pods, soft pads, bags, pouches and capsule filtration. This achievement is a result of excellent customer service, consistent quality and focused product development.

- Glatfelter has the most comprehensive range of non-heatsealable and heatsealable filter papers for use in coffee products such as vending, pods, pads and bags.
- Glatfelter is considered by many coffee-packers and coffee-brands to be the leading expert and most reliable partner in the coffee sector.
- Glatfelter supplies almost all major coffee-packers across the world supported by 80 commercial branches, agencies and other operational centers.

The most comprehensive range of coffee filter papers

| | heatsealable | | | non-heatsealable | | |
|-----------|---|-------------------------------|-------------------------------|------------------|-----------------------|----------|
| | Pod | Pad | Bag | Vending | one cup coffee filter | Capsules |
| Plain | All units from 19,0 to 27 gsm | All units from 19,0 to 27 gsm | All units from 16.5 to 27 gsm | 21 gsm | 22 gsm | 41.5 gsm |
| Patterned | 19,0 to 21.5 gsm | 19,0 to 21.5 gsm | 21.5 gsm | | | |
| Logo | custom | custom | custom | | | |
| Machines | Cloud, Gino Rossi, IMA, ICA, Opem, Optima, Universal and others | | | | | |

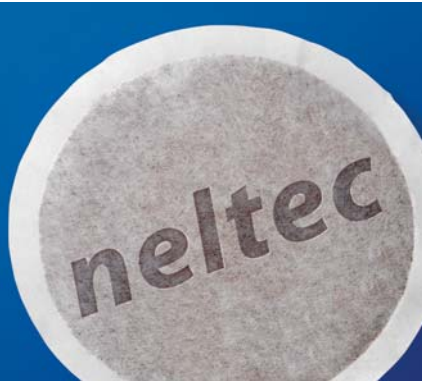

Glatfelter's product ranges correspond to unique technical properties, often proprietary, developed to meet new market needs.

GLATFELTER
Beyond Paper

*Beyond Paper™ ... is everything we do,
above and beyond making great paper – that makes us unique.*

*Neltec (new engineered logo technology)
and perfect design – your individual logo
with brilliant, clear contours and no
negative influence on paper quality*

*Glatfelter filter paper is used in single
cup brewing machines. At the press of a
button: brewing of the coffee, rapid aroma
diffusion combined with particle retention,
followed by clean removal of the
ground coffee.*

First-class filter paper

Glatfelter Composite Fibers is committed to the development of a new generation of fiber-based materials that improve brewing performance, support development of higher-speed processing machines and increase product differentiation, through specialised branding techniques. Glatfelter Composite Fibers has continuously raised the quality standard of its coffee filter products to insure they meet the requirements of coffee pods and pads used in pressure-brewing coffee machines. Today, the coffee filter paper is a key component of the supply chain:

- To ensure excellent processing on fully automated packaging machines at high converting speed
- To guarantee an optimum brewing process and delivering the full flavor of the coffee bean under pressure and heat
- To maintain the best coffee quality and preserve coffee blend freshness in an individually sealed packaging without interfering with flavor (neutrality of taste)
- To retain coffee grinds during brewing and thus minimize coffee sediment in the cup

Know-how in logo technology

Glatfelter Composite Fibers has developed personalization techniques for our range of filter papers which provide a higher definition in logo illustration compared to the classical waterjet procedure:

- **NELTEC™** technology visibly projects your coffee's mark of quality directly onto the coffee pad and is ideal for very high volume production.
- **WoW PRINTEC™** (White-on-White) is a logo print technology that meets customers' demands for clear name/logo differentiation on medium volume production. It was specially developed to provide the unique characteristic of providing a defined logo in both dry and wet states.
- **PERFOTEC™** is our state-of-the-art perfojet technology that visibly enhances the look and feel of your product by producing an uncomplicated logo design, perforation or structure onto the surface of the filter paper.

Leave a lasting impression through a precise profile of your logo, innovative branding and an enhancement of product image, while reducing the risk of counterfeiting. Glatfelter logo technology generates for you a customer differentiator and selling proposition over your competitors.

Of course, all Glatfelter coffee filter papers comply to EC, FDA and LMBFG regulations.
