

Food and Beverage: filter paper reproducing the perfect flavor

*We supply tea and
coffee filter papers
in all designs, formats
and for all converting
machines.*

GLATFELTER
Beyond Paper

*Beyond Paper™ ... is everything we do,
above and beyond making great paper – that makes us unique.*

Glatfelter Hygiene Management is certified according to BRC and IOP Global Standard for food contact packaging. We have appropriate systems and controls in place to ensure the suitability of your packaging for safe food use.

Our coffee filter paper is used in vending and brewing machines everywhere.

LONG-FIBER PRODUCTS for every kind of tea and coffee filter application.

Know-how in teabag papers

As the global market leader in teabag paper, Glatfelter has built its reputation around excellent customer service, consistent quality and on-going product development to meet all customer needs. Over the years, we have raised the quality standards of our products to insure they meet all the basic characteristics required of a high-performance filter paper:

- Problem-free processing on fully automated packaging machines
- Superior dust retention
- Excellent infusion properties
- Taste neutrality

Whether they are sealed, stapled, crimped or stitched, tetrahedral, round, rectangular or square, plain or perforated, with a logo, oxygen-bleached or unbleached, double-chambered or single-chambered bags with string and tag – tea filter papers from Glatfelter reveal their innovative capabilities in billions of cups all over the world.

Know-how in coffee filter paper

Glatfelter has been the key player in the development of long-fiber filter papers used in vending machines, single serve coffee pods, bags and capsules. As with its teabag papers, Glatfelter has continuously worked with major brands to insure the development of unique and innovative solutions for our coffee customers. Today, we have the most comprehensive range of coffee filter papers in the growing marketplace of single cup systems and applications. Our coffee filters have been engineered to guarantee optimum brewing time with rapid aroma release and maximum retention of the coffee fines.

Know-how in logo technologies

Glatfelter has developed specialized personalization techniques for tea and coffee filter papers which provide superior logo definition, enabling innovative branding and an enhancement of product image through a precise profile of your logo. Our logo technology is completely taste-neutral, useable for all filter paper packaging machines and has no negative impact on paper quality.

- **NELTEC™** technology visibly projects your coffee's mark of quality directly onto the coffee pad and is ideal for very high volumes on all filter paper packaging machines.
- **WoW PRINTEC™** (White-on-White) is a logo print technology that meets customers' demands for clear name/logo differentiation on medium volumes. It was especially developed for teabags, displaying a unique after-use wet logo effect after tea brewing.
- **PERFOTEC™** is our state-of-the-art perfojet technology that visibly enhances the look and feel of your product by producing uncomplicated logos, perforation or structures onto the surface of the filter paper.
